

PINE HEARTWOOD

Nordvest windows are supplied as standard in three engineered laminated sections of pine. The outer two laminates are in Heartwood Pine, the strongest part of the tree, and regulated slow growth year-rings on the inside laminate.

The Heartwood is the centre part of the tree with approximately 1mm between the year rings. As the tree grows the innermost cells die and form Heartwood. With Pine, the heartwood colours as the cells fill with resin. This makes the wood very resistant to rot and insect infestation.

The wood product without aluminium cladding has an expected lifetime of 40 years given the proper and specified maintenance. With aluminium cladding the expected lifetime is 60 years given proper and specified maintenance.

Pine purchased by Nordvest is FSC and PEFC certified.

All of our products are ECO-Products and have an EPD certificate (BREEAM).
